Step 2: After login you can see the below AWS console, in the Search bar type IAM and select the service IAM as shown in the below screenshot.

Step 3: Search for your user name shared with you over an email. Select the IAM username to open the User window as shown in below screenshot.

Step 4: Select security credentials and then click on Assign MFA device

Step 5: Provide any MFA device name and select Authenticator App and click on next. Example of MFA Device Name : “MyAccentureLab”

Step 6: Install “Microsoft Authenticator” app from Play store on your mobile to add MFA code.

The screenshot shows the AWS IAM console interface. The breadcrumb navigation at the top reads: IAM > Users > Enidemo12 > Assign MFA device. On the left sidebar, under 'Step 2', the 'Set up device' option is selected. The main content area is titled 'Set up device' with an 'Info' icon. Below this is a section for the 'Authenticator app'. A sub-header states: 'A virtual MFA device is an application running on your device that you can configure by scanning a QR code.' The setup process is divided into three numbered steps:

- 1** Install a compatible application such as Google Authenticator, Duo Mobile, or Authy app on your mobile device or computer. Below this is a link: 'See a list of compatible applications'.
- 2** A large light blue box contains the text 'Show QR code'. To the right of the box, the instructions read: 'Open your authenticator app, choose **Show QR code** on this page, then use the app to scan the code. Alternatively, you can type a secret key. [Show secret key](#)'.
- 3** Type two consecutive MFA codes below. This step includes two input fields: 'Enter a code from your virtual app below' (labeled 'MFA Code 1') and 'Wait 30 seconds, and enter a second code entry.' (labeled 'MFA Code 2').

At the bottom right of the form, there are three buttons: 'Cancel', 'Previous', and 'Add MFA' (which is highlighted in orange).

Step 7: Once the Authenticator apps has been downloaded to your phone, click Add Account, choose Work or School Account as shown from the below screenshot on the phone.

Step 8: To enable MFA, click Show QR code from step 6, scan the bar code with your phone, then enter the two consecutive MFA codes that show up on your phone.
